# Main Page (1)

The screenshot shows the Oxford Journals website. At the top right, there are links for 'Sign In' and 'Register' (labeled D). The main header features the 'OXFORD' logo and 'Journals' text. Below this is a navigation bar with 'Journals A to Z' (labeled A), 'Journals by Subject' (labeled B), 'Customer Services', and 'Resources' (labeled E). A search bar with a magnifying glass icon and the text 'Advanced Search' is located to the right of the navigation bar (labeled C). A dropdown menu for 'Journals by Subject' is open, showing categories: 'Arts & Humanities', 'Law', 'Medicine & Health', 'Science & Mathematics', and 'Social Sciences'. The main content area includes a large image of a building with the text 'Part of the academic community' and a description of the journal publishing program. To the right, there are three featured sections: 'A trusted society partner', 'Open access' (with a padlock icon), and 'Altmetric scores' (with a colorful pencil icon). A yellow callout box points to the 'Open access' section with the text 'Open Access 저널로 이동'. At the bottom, there are four columns for 'Authors', 'Librarians', 'Societies', and 'Sponsors and advertisers'. A large yellow callout box on the right side of the bottom section contains a legend for the annotations A through E.

Part of the academic community  
Our commitment to the academic community and to global dissemination are the touchstones of our journals publishing program.

A trusted society partner  
Oxford Academic publishes more than 200 journals on behalf of learned societies around the world.

Open access  
We are mission-driven to provide open access to high-quality research.

Altmetric scores  
We use altmetrics to highlight a paper's impact within and beyond the academic sphere.

**Bayesian Models, Delusional Beliefs, and Epistemic Possibilities**  
Matthew Parrott  
Abstract ▲

The Capgras delusion is a condition in which a person believes that an imposter has replaced some close friend or relative. Recent theorists have appealed to Bayesianism to help explain both why a subject with the Capgras delusion adopts this delusional belief and why it persists despite counter-evidence. The Bayesian approach is useful for addressing these questions; however, the main proposal of this essay is that Capgras subjects also have a delusional conception of epistemic possibility, more specifically, they think more things are possible, given what is known, than non-delusional subjects do. I argue that this is a central way in which their thinking departs from ordinary cognition and that it cannot be characterized in Bayesian terms. Thus, in order to fully understand the cognitive processing involved in the Capgras delusion, we must move beyond Bayesianism.

#### Abstract

I defend a radical interpretation of biological populations—what I call population pluralism—which holds that there are many ways that a particular grouping of individuals can be related such that the grouping satisfies the conditions necessary for those individuals to evolve together. More constraining accounts of biological populations face empirical counter-examples and conceptual difficulties. One of the most intuitive and frequently employed conditions, causal connectivity—itself beset with numerous difficulties—is best construed by considering the relevant causal relations as ‘thick’ causal concepts. I argue that the fine-grained causal relations that could constitute membership in a biological population are manifested by different membership as being different constructs, the difference showing that positions depend on a view of the defended here.

intuitive and frequently employed conditions, causal connectivity itself beset with numerous difficulties—is best construed by considering the relevant causal relations as ‘thick’ causal concepts. I argue that the fine-grained causal relations that could constitute membership in a biological population are huge in number and many are manifested by degree, and thus we can construe population membership as being defined by massively multidimensional constructs, the differences between which are largely arbitrary. I end by showing that positions in two recent debates in theoretical biology depend on a view of biological populations at odds with the pluralism defended here.
